**About:**

Online Document Viewer is a tool for viewing different office formats in the browser as HTML5 content.

**The supported formats include:**

doc, docx, xls, xlsx, ppt, pptx, pdf, and all open office formats.

**How it Works?**

It makes use of libreoffice-writer on the server to convert all the above mentioned formats into pdf format. And it uses pdfjs, a JavaScript plugin by Mozilla for converting pdf in HTML5 and rendering it.
